Civilian Tactical Law Enforcement: FBI Experience in 2012
Future Needs and Challenges

William Fabbri, M.D., FACEP
Medical Officer, FBI
Medical Director, Emergency Medical Support
And Operational Medicine

This Briefing is UNCLASSIFIED
The opinions in this briefing are those of the author. They do not necessarily represent the opinion of the Federal Bureau of Investigation or of the United States Government.
Recently Accomplished
(And Recommended to Colleagues)

• Uniform medical critical actions training
  – “MARCH” replaced “ABCD”
  – Starts in New Agent Training
  – Applied to EMT operations

• Standardized basic equipment
  – Hemostasis
  – Airway
  – “I-FAK”
  – Tactical EMT Rucksack

• Problem Based Training
  – Tactical EMT-Bs and Ps
Works In Progress

• System Wide Field Spine Clearance (by EMT-B)
• TBI Awareness (operators)/Protocols (EMOPRs)
• CBRN Immediate Medical Actions
The Future Is Coming
This Isn’t It.
This is.
Future Projects

• Improve Liaison
  – FBI SWAT vs. EMS System
  – Routine AND Special Events
  – Common training

• Further Expand Scenario Training

• “Simplified ALS Suite”
Doing All of It With Less:
LE EMS+Civilian EMS

Hemostasis:

• Are receiving EMS agencies and EDs prepared to properly receive a patient w/ a TQ?

• Do we in recognize “the speedy lethality of uncontrolled bleeding” when it occurs in this other settings?

• Can we collect data clarifying outcomes in the civilian sector?
